3.1.1 Motor box for 4 axes

Description

The motor box is a connection adapter between a motor cable for 4 motors and 4 motor cables for one motor each. The motor box is connected at the robot controller with a multiple connector. 4 motor cables can be connected via single-axis connectors. The motor box is available in the following versions:

- with rear wall inlet
- with side wall inlet

- closed

The motor cables of the individual axes must be connected directly to the HAN modules of the multiple connector. For this, the corresponding holes for the cable inlets must be drilled in the housing.
